## Tax/ Tip:

A percentage of a total amount that is added back to that original amount.

## Commission:

A fee paid to a person for making a sale.

EX: Car salesman, Realtor

Example- Together: $\downarrow$ +otal Sheila bought $\$ 146.87$ worth of groceries. The sales tax rate was 6\%. Proportion:
 How much did she spend in all? $X=8.81$

$$
\begin{aligned}
& \text { Sales Tax: } \frac{\$ 8.81}{\$ 155.68} \\
& \text { Total: } \frac{\text { \$ }}{(146.87+8.81)}
\end{aligned}
$$

Example- Together:
Michael's breakfast bill came to \$7.65. He wants to leave a tip that is $15 \%$ of the bill.
tot How much did he spend in all?

$$
\frac{x}{7.65}=\frac{15}{100}
$$

Tip: $\qquad$ $\$ 1.15$ $x=\$ 1.15$

Total: $\qquad$ $(7.65+1.15)$

Example:
Mavis went to the store to buy a pair of pants. The pants were originally \$55. There was a discount of $20 \%$ tot and a sales tax of $7 \%$. What was the

$$
\begin{aligned}
& \text { final price Mavis paid? } \\
& \frac{x}{55}=\frac{20}{100} \quad x=\$ 11 \quad \frac{x}{\text { discant }}=\frac{7}{44} \quad \begin{array}{l}
x=1 \\
\$ \overline{3}, 08 \\
\operatorname{tax}
\end{array} \\
& \begin{array}{c}
55-11=\begin{array}{c}
\$ 44 \\
\text { sale } \\
\text { price }
\end{array}
\end{array} \$ 44+3.08 \\
& \text { Final Price }
\end{aligned}
$$

Example:
Calculate the commission earned: $15 \%$ on $\$ 26,000$ in sales.

$$
\begin{aligned}
\frac{x}{26000} & =\frac{15}{100} \\
x & =\$ 3,900 \\
& \text { commission }
\end{aligned}
$$

Find the total earnings, given the salary, commission rate, and sales.
$\$ 2,000$ plus $9 \%$ on sales of $\$ 2,800$

$$
\begin{array}{rr}
\frac{x}{2800}=\frac{9}{100} & \begin{array}{c}
2000+252 \\
\text { salary commission }
\end{array} \\
x=\$ 252 & \$ 2,252 \\
\text { commission } &
\end{array}
$$
